LabMedExpert
Success Nothing Less

INTRODUCTION

Pathology laboratory is involved in 70% of all diagnosis within the NHS, but very little of what they do is known to the public, or indeed, to many other health-care professionals. Pathology staff provides doctors with the vital information they need to assess and treat patients.

TRAINING FOR SCIENCE GRADUATES

1. LabMedExpert is a training organisation that specialises in providing real life laboratory experience to graduates, students and school leavers.

2. Our Services

- Intensive Histology Training - CPD Accredited.
- Intensive Microbiology Training - CPD Accredited.
- Medical Laboratory Assistant Training TQUK Level 3

3. If you studied Biomedical Science, Biological Science, Human Bio-science, Microbiology, Biochemistry, Biology or other Biological related degree and couldn't find a job due to the lack of experience, then LabMedExpert practical-oriented training is for you.

Contact us:

Tel: 01902287065

E-mail: info@labmedexpert.com

Address: PD 202 University of Wolverhampton Science Park, Glaisher Drive, Wolverhampton WV10 9RU.

Are you looking for a job within the Biomedical industry?
Or looking for a band 3, band 4 or band 5 roles? Then our CPD accredited trainings would be a right fit for you!

Please, check out our reviews on Google, Trustpilot, and YouTube @LabMedExpert.

TESTIMONIALS

Aarif: Intensive Histology Training Candidate

I am a previous trainee and from holding a degree by name I had no experience in a real life situation for histology apart from my degree. Having done this 4 weeks training with LabMedExpert I am now competent to carry out everything the NHS requires in the NHS histology lab. I would like to thank the trainers for all their help in pushing me into a career. I am now part of the big family of LabMedExpert and onwards to the future. ***This is an investment to my future and would highly recommend to all.*** I know should I ever need to contact the company for advise they would be happy to help and guide me. I was unsure at first and called to get more information and was happy with what I heard. Again, thank you is not enough!

Nicholas G: Intensive Histology Training Candidate

I saw adverts for this course on Google and Indeed at a discounted price and although I was sceptical at first, I decided

to take the plunge. I was even offered the chance to pay instalments, which I didn't need.

This course is very well run, suitable for those with zero histology experience and offering a full scope of the process from specimen reception, to microtomy, to staining and QC- but with an emphasis on precise and efficient sectioning. Everyone on the course has individual access to a microtome and plenty of time to develop their own techniques. The course is 80% practical with 20% theory, based on commonly encountered problems in the lab and gives people the skills needed to start work straight away as a Band 4 Associate Practitioner (although this would equally suit someone doing CPD to move up to Band 5 BMS.)

I thought both the trainers were patient, personable, extremely professional and went the extra mile to make sure we got the best out of our time in the lab, as well as giving us plenty of 1 on 1 attention to iron out our weaknesses and ensure we were prepared before the final assessment. In addition, they also offered everyone assistance in finding locum work with a healthcare agency so that we could find employment as soon as possible.

This was a definitely a worthwhile investment and has helped me kickstart my career, having previously been at a

disadvantage for lack of lab experience. After completing the course, I had a few permanent band 5 BMS interviews and whilst waiting for the outcomes, I signed up to YourWorld agency. ***Within 3 weeks, they found me Band 4 locum work. After 5 weeks, I have already earned back the cost of the course in earnings. I only wish I'd heard of this LabMedExpert sooner.***

Jennifer: Intensive Histology Training Candidate

The course has been very important to me as it gave me the skills needed to kick start my career. Since finishing the course, I got numerous job interviews in the NHS. ***I finally secured a band 5 job 2 months after completing.*** I strongly recommend this course . The head trainee, has been an excellent mentor, very patient. I was guided even after completion of the course on interview skills and cv writing. Thank you labmed, U changed my life.

Kash Boyal: Intensive Histology Training Candidate

A great step for a graduate like me to gain the skills and experience needed to become a suitable candidate for the histopathology NHS jobs. I was working within the NHS within 2 weeks of completing this course (roles worked as: Band 4 associate practitioner and Band 5 trainee BMS) and could not have done it without this initiating step in my career. Training by LabMedExpert was provided in an enjoyable, informative and well-organized manner.

Pellagia Margolis: Intensive Histology Training Candidate

If you love histology, then this is the course for you. Wonderful, loved every moment. All the laboratory staff were helpful always. They were always a massive help and always helped me.

I got a job before even completing the training. I feel confident to take my career in a new direction.

Gauri Sethi: Intensive Histology Training Candidate

I am receiving offers for NHS jobs after

doing this intensive training on histology from LabMedExpert. The training has taught me various skills which includes embedding, staining, microtomy, special

staining etc. ***So many people are unaware of the fact that after doing their higher studies with little effort of getting specific trainings can help them to get a good profile jobs in private sector or NHS hospital.*** I would recommend biomedical students to get enroll for the training and experience the knowledge and better opportunities themselves.

More of our reviews could be found on Google, YouTube, and Trustpilot.

WHY DID WE COME UP WITH THIS IDEA?

In the past few years, the National Health Service (NHS) have been experiencing shortage of Biomedical Scientists (BMS's), and we believe the best way to resolve this is by providing quality hands-on-skills training to inexperienced science graduates. All our training officers are highly experienced and competent in the delivery of our intensive trainings.

WHAT MAKES US DIFFERENT FROM OTHER TRAINING PROVIDERS?

1. All of our trainings are hands-on-skills which will equip you with the experience that most employers are looking for.
2. The experience you will acquire at LabMedExpert training laboratories is transferable, which is why most of our trainees are able to secure employment after completing their training with us.
3. We prioritise quality over quantity which is why all of our trainees have access to their own equipment throughout the duration of their training with us.

4. Our quality performance is measured through our 96% employability rate in 2019.

5. We are masters at providing experience through our CPD Accredited training with most of our histology trainees are currently working as Band 4 and Band 5 practitioners in various NHS histopathology laboratories across the UK.

6. We offer you the option of a 0% interest free loan to make the training cost more affordable.

7. We will assist you in finding jobs within the NHS and private pathology laboratories.

INTENSIVE HISTOLOGY TRAINING-CPD ACCREDITED.

LabMedExpert, has introduced a CPD accredited Intensive Histology Training to address the shortage of Histology Biomedical Scientists in the U.K. This training focuses on all aspects of histological techniques such as Specimen reception, tissue processing, embedding, microtomy, stainings, block-checking QC and microscopy QC. You will start performing these techniques from Day 1 and you

will become independent in performing these techniques from week 2. ***This is mainly hands-on-skills training that contributes to your LabMedExpert competency portfolio and a CPD accredited certificate.***

INTENSIVE MICROBIOLOGY TRAINING-CPD ACCREDITED.

The Microbiology training offered by LabMedExpert is introduced to address the shortage of Microbiology Biomedical Scientist in the country. The experience you will acquire during this training includes; bacteriology, Parasitology, Virology, Mycology, Mycobacteriology and Fluorescence Microscopy. ***This is mainly hands-on-skills training*** that will lead to LabMedExpert competency portfolio and a CPD accredited certificate.

INTENSIVE MEDICAL LABORATORY ASSISTANT TRAINING TQUK LEVEL 3

This Training is designed to address the shortage of Medical Laboratory Assistants (MLA) in the country. This is a level 3 qualification that gives all school leavers or non-science graduates the laboratory skills and experience that is required

by most employers.

For more information on any of the above courses, job opportunities, finance option etc, please, call us on 01902287065 or email: info@labmedexpert.com.

OPEN DAY

We host Open Day to prospective trainees quarterly and accept private visitations from visitors. Visitations can be arranged by contacting us @ info@lab-medexpert.com.
